Orthodontic headgear

Acces PDF

Diagnosis Of The

Orthodontic

is a type of orthodontic appliance typically attached to the patient's head with a strap or number of straps around the patient's head or neck. From this, a force is transferred to the mouth/jaw(s) of the subject. Headgear is used to correct bite and support proper jaw alignment and growth.

Diagnosis Of The Orthodontic Patient

Diagnosis. Diagnosing CTS has been a challenge to dental practitioners and is a source of frustration for both the dentist and the patient.

Identification can be difficult because the discomfort or pain can mimic that arising from other pathologies, such as sinusitis, temporomandibular joint disorders, headaches, ear pain, or atypical orofacial pain.
