Direct Vent Heaters Troubleshooting Manual

Direct-Vent Counterflow The forced-air circulation comfort heating system uses only outside air for combustion, as the burners are completely sealed within the combustion chamber. Combustion products are discharged outdoors through the wall vent. This eliminates the expense of a vent. All vent caps include a built-in "Bird Guard."

Direct Vent Detail Page - Williams Comfort Product

Environmental Issues: The heaters should be installed in relatively clean areas with access to sufficient combustion air that is free from dust, lint, grease, or chemicals. If any of these conditions are present, a direct vent model or kit should be installed.

Vented Room Heater Detail Page - Williams Comfort Product

A power vent water heater has a device that works by drawing combustion air from the room containing the water heater. It then uses a fan to move the exhaust air through the pipe and vent outside the house. On the other hand, a direct vent water heater hinges on the natural tendency of hot air to move upwards.
