Geothermal Energy: From Theoretical Models to Exploration ...

Geothermal energy is the thermal energy generated and stored in the Earth. Thermal energy is the energy that determines the temperature of matter. The geothermal energy of the Earth's crust originates from the original formation of the planet and from radioactive decay of materials. The adjective geothermal originates from the Greek roots γῆ, meaning Earth, and θερμός, meaning hot. Earth's internal heat is thermal energy generated from radioactive decay and continual heat loss from ...

Geothermal energy - Wikipedia

Geothermal heat energy can be recovered and exploited for human use, and it is available anywhere on Earth's surface. The estimated energy that can be recovered and utilized on the surface is 4.5 × 10 6 exajoules, or about 1.4 × 10 6 terawatt-years, which equates to roughly three times the world's annual consumption of all types of energy.

Also, for HDR geothermal energy, the coupled behaviour of thermal, hydraulic, geomechanical and geochemical (THMC) processes combined will significantly affect a simulation outcome. Other geological factors, such as the lateral permeability effect, which are ignored in the simulation, could also have caused the mismatches in the current model.
