Create a module that implements a NOT gate. This circuit is similar to wire, but with a slight difference. When making the connection from the wire in to the wire out we're going to implement an inverter (or "NOT-gate") instead of a plain wire.. Use an assign statement. The assign statement will continuously drive the inverse of in onto wire out.

A solar micro-inverter, or simply microinverter, is a plug-and-play device used in photovoltaics that converts direct current (DC) generated by a single solar module to alternating current (AC). Microinverters contrast with conventional string and central solar inverters, in which a single inverter is connected to multiple solar panels. The output from several microinverters can be combined and ...
