The laser cavity, or resonator, is at the heart of the system. A single transit through a collection of excited atoms or molecules is sufficient to initiate laser action in some high-gain devices such as excimer lasers; however, for most lasers, it is necessary to further enhance the gain with multiple passes through the laser medium.

### Lasers: Understanding the Basics | Lasers | Photonics ...

The laser is among the most important inventions of the twentieth century. Since its introduction in 1960, the laser has made possible a countless number of scientific, medical, industrial, and commercial applications. Theodore Maiman, the inventor of the first working laser, was quoted by The New York Times in 1964 as calling the laser "a
