The Eysenck Personality Profiler (EPP) breaks down different facets of each trait considered in the model. There has been some debate about whether these facets should include impulsivity as a facet of extraversion as Eysenck declared in his early work, or of psychoticism, as he declared in his later work. Publication in far right-wing press

Hans Eysenck - Wikipedia

Eysenck's personality theory is considered a true paradigm and the most solid theory that psychology has offered. The theory best explains why each person has their own personality. The theory states that there are three large traits inside each of us. These three traits are psychoticism, extraversion, and neuroticism.

Eysenck's personality theory - Exploring your mind

The Hindi version of the Eysenck Personality Inventory and the Trait scale of the Hindi version of the State-Trait Anxiety Inventory were administered to 945 female Indian students (M age = 20.4 yr., SD = 1.4) to study the personalities of those scoring low and high on the Lie scale, and the association of Lie scale scores in the intercorrelation between Impulsivity and Neuroticism under no motivation to fake good.

Eysenck Personality Inventory: Impulsivity/Neuroticism and ...

Eysenck's dimensional model of personality (Eysenck & Eysenck, 1985) argues that individual differences can be most economically and adequately summarized in terms of three higher order factors which he defines as introversion-extraversion, neuroticism-stability and tendermindedness- toughmindedness (or psychoticism).
