Introduction to Controlling Microbial Growth. The control of microbial growth may involve sterilization, disinfection, antisepsis, sanitization, or degerming. Sterilization is the destruction of all forms of microbial life, with particular attention to bacterial spores. Disinfection and antisepsis both refer to destruction of microbial pathogens, although some organisms, such as bacterial spores, may remain alive.

CULTURE MEDIA A culture medium is any material prepared for growth of an organism in a laboratory setting. Microbes that can be cultured on a petri-plate or in a test-tube containing media are said to grow under in vitro conditions ("within-glass"). It was not until the era of Robert Koch and his coworkers that Agar was introduced as a common medium for bacterial growth.
