This manual describes how to build a 'permanent magnet generator' (PMG). We can also call it an 'alternator', because it generates alternating current (AC). It will not generate 'mains voltage' or 'utility power' AC. It generates low voltage, 'three phase' AC, and then changes it into 'direct current' (DC) for charging a 12 volt battery.

The alternator that is employed in this manual is a permanent magnet alternator (PMA) but there are many options that can be used in the generator. Choices range from running a DC motor backwards to using a stepper motor removed from an old copy machine. The amount of energy that can be produced from the generator is largely

Five Gallon Bucket Hydroelectric Generator Build Manual

The plans describe how to build a permanent magnet alternator. The alternator can be wired for 12, 24 or 48-volt battery charging. Essentially this choice only affects the size of wire and the number of turns per coil. But the tower wiring for the 12-volt version will be much heavier than the others. And the stator for the small machine is

The magnetic field is manipulated to our advantage, when making a Permanent Magnet Alternator (PMA). By concentrating the magnetic field between two opposite magnet poles, and capturing the flux in iron plates that would otherwise be wasted, we direct as much energy as we can through the gap between the faces.
