n) is the power to which the number 2 must be raised to obtain the value n . That is, for any real number x , $2^x = n$. For example, the binary logarithm of 1 is 0, the binary logarithm of 2 is 1, the binary logarithm of 4 is 2, and the binary logarithm of 32 is 5.. The binary logarithm is the logarithm to the base 2 and is the inverse function of the

It usually takes 15-30 days depending on the number of questions and expert's availability to get a solution manual prepared. If you want the solution right away, you can post the specific question through the "Post A Question" form and have our experts solve it right away. I have a similar book. Not the exact one.
