## **The Tab Book Of Arduino**

What isn't obvious is that with Arduino, you can have normal C and C++ files in the same directory as the .ino file. These can have functions and variables inside them, and Arduino will link them into the main program too. You only need one .ino file - all the rest can be in modules with a .c or .cpp (for C++)

The Arduino web  
server temperature  
measurement project  
can easily be tested on  
a local network, but  
you may want to be  
able to access the  
Arduino web page from  
the Internet using a  
smart phone, tablet or  
external computer -  
i.e. use the project for
