Thallium is a chemical element with the symbol Tl and atomic number 81. It is a gray post-transition metal that is not found free in nature. When isolated, thallium resembles tin, but discolors when exposed to air. Chemists William Crookes and Claude-Auguste Lamy discovered thallium independently in 1861, in residues of sulfuric acid production. Both used the newly developed method of flame ...

Sue was a bright and talented high school student. She had always been healthy and done well in school. In the past year, she added more activities, including early morning swim practice, a college prep class, a role in the school play, and work on the school yearbook. She knew her schedule would be really busy, but she enjoyed all of the ...
